

Instructions:

1. Tap the top of the egg with a back of a spoon.
 2. Use a tray/pot to hold the egg. Add water in until water trickles out of the bottom of the egg, onto the tray.
 3. Do not leave the egg in direct sunlight. Place it at bright spots for indirect sunlight.
 4. You can move the plant to a bigger pot with good soil. Crack open the egg and plant directly onto soil.
- Water once a day to keep the soil moisturised (excessive water will weaken the plant)
 - Fertilize it every 3 weeks

**Basil**

Sow the seeds thinly in the pots provided between March to July.
Place on a warm sunny windowsill, in a propagator or heated greenhouse.
Keep the top of the compost moist by standing the pot in a saucer of water for about an hour as required.
Pinch out the top of each seedling when it has formed about 3 pairs of leaves.
Keep in a warm sunny position and water only so the compost is moist.
Pick the leaves as needed usually after about 3 weeks.

Chives

Sow the seeds thinly in the pots provided between March to June.
Place on a warm sunny windowsill, in a propagator or heated greenhouse.
Keep the top of the compost moist by standing the pot in a saucer of water for about an hour as required.
Keep in a sunny position and water only so the compost is moist.
Snip the leaves near their base as needed and this will encourage more young growth.
Pot into a larger pot or plant in the garden when the plant fills the pot.

Parsley

Sow the seeds thinly in the pots provided between February to June.
Place on a warm sunny windowsill, in a propagator or heated greenhouse.
Keep the top of the compost moist by standing the pot in a saucer of water for about an hour as required.
Once the seedlings start to appear place in a sunny position and water only so the compost is moist.
Can be moved outside when the risk of frost has passed.
Pick leaves as required and remove any flowering stems as they appear.
